

SQL Joins

Exploring the Different Types

A JOIN clause is used to combine rows from two or more tables, based on a related column between them.

(INNER) JOIN:

Returns records that have matching values in both tables.

LEFT (OUTER) JOIN

Returns all records from the left table, and the matched records from the right table.

RIGHT (OUTER) JOIN

Returns all records from the right table, and the matched records from the left table.

FULL (OUTER) JOIN

Returns all records when there is a match in either left or right table.

FULL (OUTER) JOIN

Returns all records when there is a match in either left or right table.
